

# Monsooned Malabar A

India Green Coffee Beans | Genuine Origin

The unique flavor profile of Monsooned Malabar and India's green coffee bean production are closely tied. The monsooning process was stumbled upon in colonial days. During transport in the monsoon months unroasted coffee was subject to wet weather and absorbed moisture that strongly impacted the cup.

Transportation improved, but demand for the unique monsooned cup profile remained. Today, the moon-sooned processing method is recreated under more controlled settings.

Some roasters prize the nuances they derive from roasting Monsooned Malabar raw coffee beans while others believe the profile to be the result of defective processing.

## Origin

India

## Region

Southern India—Karnataka

## Producer

Various smallholders

## Processing

Monsooned

## Harvest Schedule

October–February

## Variety

S795, Catimor, Selection 9

## Altitude (MASL)

1200
