Kangunu FCS, Kangunu factory

PROCESSING

Washed

HARVEST SCHEDULE

April - July

VARIETY

SL34, SL28, Ruiru 11

ALTITUDE (MASL)

1600-1800

Coffee Background

Kangunu Farmers' Cooperative Society (FCS) and Coffee Factory (wet mill) is based in Murang'a County, an area famous for being the origin of the Mau Mau uprising in the mid-20th century. The Kangunu FCS established the Kangunu factory in 1998. An elected board manages the cooperative and the Secretary Manager oversees the group's day-to-day activities with the help of a permanent staff.

Murang'a County enjoys cool temperatures of 16-26°C and around 1,200mm of rainfall per year. The rich volcanic soil is perfect for growing coffee. In particular, farmers here grow SL-34, SL-28, and small amounts of Ruiru-11.

Green coffee from Kenya is graded by screen size, not necessarily by cup quality or defect count. The grades range from E (Elephant Bean), PB (peaberry), AA, AB, C, and other subsequent lower grades. This AA screen size coffee comprises large, dense green coffee beans at screen size 17/18.
