Swiss Water

### PROCESSING

Swiss Water Decaf

### HARVEST SCHEDULE

September - December

### VARIETY

Caturra, Castillo, Typica

### ALTITUDE (MASL)

1300-1500

## Coffee Background

When someone switches to decaf, it's clear that there's an attachment to the flavor of coffee that they can never give up. Now, it's easier than ever to have delicious caffeine-free coffee with all the characteristics of beloved origin terroirs. With constant innovations and improvements in decaf processing methods decaf drinkers can enjoy their coffee without sacrificing quality or flavor experience.

That means a washed Colombian coffee like this one from Antioquia can shine, even as a decaf. Roasters will detect enticing notes of dark chocolate, caramel, roasted almond, and red apple in a heavy-bodied cup with mild acidity. The regional blend was sourced from smallholder farmers that supply coffee to a select group of Colombian coffee exporters.

The Swiss Water Process, developed in Switzerland, is a natural, chemical-free way to decaffeinate coffee. Swiss Water boasts a process that is not only clean and natural, it also keeps the original flavor of the coffee intact.
