Semi-Washed, Wet-
Hulled (Giling Basah)

HARVEST SCHEDULE

May - August

VARIETY

OsdA, Cobra, Typica

ALTITUDE (MASL)

1200 - 1500

Coffee Background

Grown in the lush volcanic highlands of Bondowoso, East Java, this fresh Arabica offering is a tribute to the region's rich agricultural heritage and dramatic natural beauty. Cultivated at altitudes ranging from 1,200 to 1,500 meters above sea level, the coffee thrives in fertile soils nourished by Mount Ijen, an active volcano famed for its rare Blue Fire phenomenon - a surreal blue flame caused by ignited sulfur gases, visible only in two places on Earth: Ijen Crater and Iceland.

This coffee is produced by a dedicated group of farmers—Budi Raharjo, Ali Wavi, and Mian—who grow varieties such as OSDA, Cobra, and Typica. The cherries are selectively handpicked at peak ripeness, ensuring only the best coffee is processed.

This lot is a Grade 1 (G1) coffee, which, in Indonesia, is the highest quality rating. This lot was also Triple Picked (TP), signifying that it underwent a meticulous sorting process to remove defects and ensure uniformity.

Coffee cultivation in East Java dates back to the Dutch colonial era, with the first coffee factory near Mount Ijen still standing today. This legacy continues through modern producers who blend tradition with innovation, crafting coffees that reflect the terroir and spirit of the region.
