

WEST JAVA BANDUNG G1 TP SEMI-WASHED

INDONESIAN GREEN COFFEE | GENUINE ORIGIN

Coffee Details

ORIGIN

Bandung Regency, West Java, Indonesia

PRODUCER

Rotua Pangaribuan

PROCESSING

Semi-Washed, Wet-Hulled (Giling Basah)

HARVEST SCHEDULE

May - August

VARIETY

Kartika, Lini S, Sigararutang, Ateng, Andungsari, Komasti

ALTITUDE (MASL)

1200 - 1500

Coffee Background

Grown in the volcanic highlands of Bandung Regency, this Grade 1 Arabica coffee reflects the rich agricultural traditions of West Java. Sourced from smallholder farms across Pangalengan, Ciwidey, Lembang, and Garut, the coffee is cultivated at elevations of 1,200 to 1,500 meters, where cool temperatures and fertile volcanic soils create ideal conditions for slow cherry maturation and flavor development.

Local farmers practice selective picking, harvesting only ripe cherries to ensure quality. The varieties grown - Kartika, Lini S, Sigararutang, Ateng, Andungsari, and Komasti - are well adapted to high altitudes and known for their consistent cup profiles.

The coffee undergoes a semi-washed process, where ripe cherries are selectively harvested. The outer skin of the cherries is removed, leaving some of the mucilage (coffee honey) to stay on the bean. The coffee beans are wet hulled (Giling Basah) while the beans are still moist, contributing to the coffee's signature earthy and syrupy profile.

Beans are dried under direct sunlight on patios, turned regularly to ensure even drying until they reach optimal moisture levels.
