

PEABERRY PLUS WASHED

TANZANIAN GREEN COFFEE | GENUINE ORIGIN

Coffee Details

ORIGIN

Mbeya & Kilimanjaro,
Tanzania

PRODUCER

Various smallholders

PROCESSING

Washed

HARVEST SCHEDULE

July - September

VARIETY

Kent, Bourbon, N39,
local Varieties

ALTITUDE (MASL)

1200 - 1900

Coffee Background

Tanzania PB Plus is sourced from both the Northern and Southern coffee-growing regions of the country, where altitudes range from 1350-1850 masl in the North and 1200-1700 masl in the South. These regions produce coffee on fertile soils with reliable rainfall and cool temperatures that support slow cherry development and high cup quality.

Most coffee comes from smallholder farmers, typically with an average of 1 - 2 hectares, as well as private estates. Smallholders deliver their cherries through AMCOS groups or process them at home using hand pulpers. Tanzania's network of AMCOS plays an essential role in organizing farmers, providing centralized processing, and connecting parchment to mills before it enters the auction or direct market.

Peaberry (PB) coffee forms when a single round seed develops inside the cherry instead of the usual two. These beans are denser and more spherical, appearing in only a small percentage of the harvest. Tanzania's PB grade is highly regarded, and this lot combines peaberries from both Northern and Southern suppliers.
